

PI PROP INTELLIGENCE

COMPLETE APPLICATION GUIDE

Every screen, control, workflow, status, provider, and operating rule

CURRENT EDITION Updated through August 21, 2026. Web/PWA release; no App Store or Play Store distribution is assumed.

Prepared for PI PROP INTELLIGENCE LLC

Independent sports research and intelligence only. PI does not facilitate wagering or accept bets.

Contents

- 1. Product purpose and quick start**
- 2. Sign-in, account, and membership**
- 3. Workspace navigation**
- 4. Market Board**
- 5. Prop cards and research**
- 6. Sports and season status**
- 7. Scoreboard and Game Markets**
- 8. Research features**
- 9. Build and active slips**
- 10. Live tracking and history**
- 11. Prop Chat and notifications**
- 12. Supported sports and prop sites**
- 13. Owner tools**
- 14. Loading, empty, stale, and error states**
- 15. Troubleshooting and responsible use**

1. Product purpose and quick start

PI PROP INTELLIGENCE is a web-first sports research workspace. It organizes live prop markets, provider comparisons, model context, tracking, history, and community tools. It does not place wagers, hold funds, or replace the rules and settlement decisions of a sportsbook or fantasy operator.

1. Open app.propsintell.com in a current browser and sign in.
2. Select an in-season sport in the top banner. The app may choose an active MLB, NFL, NBA, or WNBA market at startup.
3. Select a prop site or keep All Prop Sites, then review freshness before evaluating a card.
4. Open View Research for a readable translucent research overlay; use the close control or click outside it to return.
5. Select Over or Under to add a leg. Select the same side again or use Remove to undo it.
6. Open the right-side Slip control to review, remove, save, or lock the active ticket.
7. Use Slip Watcher for unresolved tickets and Past Slip History for settled tickets.

VERIFY THE SOURCE Lines, odds, multipliers, market rules, and settlement terms can change. Always confirm the current value at the named prop site before making an external decision.

2. Sign-in, account, and membership

Control	Purpose	How to use
Email / Password	Authenticate an existing member	Enter credentials and complete any requested CAPTCHA or email verification.
Continue with Google	Use supported federated sign-in	Choose the intended Google identity. PI creates a privacy-safe display name when needed.
Forgot Password	Secure recovery	Request the email, open the time-limited link, and set a new password.
Account rail	Identity, plan, and billing	Open Account to review membership, manage or restore access, and sign out.
Membership badge	Shows Core, Pro, or Owner status	The badge is informational. Server authorization, not color alone, controls access.
Sign Out	Ends the current session	Use the gold Sign Out control on shared devices.

Core provides standard research, board, tracking, history, and community access. Pro unlocks advanced model direction and protected intelligence tools. Owner access includes Pro capability plus private

operations functions. Internal code may use the term Edge for the Pro entitlement; customer-facing documentation uses Pro.

3. Workspace navigation

Area	Items	Behavior
Top sports banner	Scoreboard, Sports, MLB, NFL, NBA, WNBA, NHL, Soccer, NCAAF, NCAAB, CFL, Owner Ops	Sports stay across the top. Gold marks the active sport; inactive controls remain silver.
Research	Today's Briefing, Market Board, Search Players, Line Movement, Injury Impact, Analytics, Prop Chat, Score Watch, The Lab, Referee/Officiating Tracker, EV Scanner	Sections remain open until the user collapses them.
Build	Prop Builder, Build Performance, Slip Watcher	Build and organize research-backed tickets.
History	Past Slip History, Track Record	Review settled tickets and the published model record.
Specialty	Strikeout Pro Gold	MLB pitcher strikeout research for Pro members.
Right utility rail	Account, Slip, live prop count, membership	Labels remain visible; counters do not overlap icons.

4. Market Board

- Search is the widest control and matches player, team, or market text.
- Filters opens sport-aware category, side, tier, confidence, verdict, and other supported filters.
- Prop Chat opens the community workspace without changing the current market data.
- Provider chips show the first available sites; More opens additional sites. Gold marks only the selected provider.
- Status groups show Live/Stale, updated age, event count, active providers, and providers with no inventory.
- Category rails show All and only categories with current inventory. Counts distinguish total inventory from playable research candidates.
- Verdict groups such as Best Now, Slight Edge, Better Line, Wait/Monitor, and All Props organize recommendation readiness.
- Provider sections keep each site's props together. Balanced rows expand to fill the section without blank card slots.

Board state	Meaning	User action
Live	Current provider data is within freshness	Continue research and confirm the named

Board state	Meaning	User action
	policy.	source line.
Refresh Due / Stale Data	The latest successful provider update is older than expected.	Wait for recovery or refresh once; do not rely on a stale Pro recommendation.
No Inventory	A connected provider returned no active props.	This is not necessarily an outage; select another site or sport.
Recovery Running	Automatic provider recovery is active.	Avoid repeated manual refreshes while cooldown/retry logic runs.
Owner Alert	Expected provider freshness crossed an owner threshold.	Owner reviews provider, quota, workers, and last successful update.

5. Prop cards and research

Card element	What it means
Headshot / initials	Stable keyed player identity. The previous valid image or branded fallback remains visible while a new image loads.
PI Pick / PI Signal / Model Pick	The qualified system direction and selected line when authorized. A lean is not the same as a released play.
PI Trust	Data-readiness and confidence context, not a guaranteed win rate.
Projection / verdict side	Model estimate or research direction used in the explanation.
Under / Line / Over	Select a side to add it; select the same side again or use Remove to undo.
EP	Opens other active props for that player. Other card areas should not trigger this player-props overlay.
View Research	Opens a blurred translucent modal with enlarged text, evidence chips, injury context, explainability, and research tools.
Provider and sport strip	Identifies exactly which site and sport supplied the displayed market.

Research opens as a dedicated scrollable overlay rather than expanding between grid cards. Close Research dismisses the overlay. This protects card alignment and keeps detailed methodology readable on laptops and phones.

6. Sports and season status

Situation	Panel heading	Behavior
Filters removed all results	No Props Match These Filters	Clear or adjust filters; sorting alone is not treated as a filter.
Upcoming games, markets not open	Preseason - Markets Opening Soon	Shows first scheduled game, countdown, and up to three matchups.
Game imminent, no props	Markets Currently Unavailable	The app keeps checking connected sites.
No future seasonal schedule	Offseason	Updates automatically when the scoreboard schedule becomes available.
Schedule lookup failed	Schedule Temporarily Unavailable	Does not mislabel a network failure as offseason.
Soccer or tennis gap	No Upcoming Markets / Events Coming Soon	Avoids inaccurate season language for multi-league or tour sports.

View Schedule opens the first available matchups. Notify Me enables session-level market notification feedback. Check Again reruns the prop query. Dates come from scoreboard data and are not hard-coded.

7. Scoreboard and Game Markets

- Scoreboard: choose date, status, and sport; review upcoming, live, and final games in local 12-hour time.
- Watch: add a game to Score Watch for score-change, final, overtime, or extended-play alerts.
- Game Markets: compare moneyline, spread, and total markets across available books.
- Refresh: requests the newest scoreboard state; authoritative final status is required before grading.
- The desktop left sidebar remains consistent when Scoreboard opens; user-collapsed groups stay collapsed until reopened.

8. Research features

Feature	Access	How to use / what it does
Today's Briefing	Public/Core	Summarizes what clears the daily bar and explicitly states caveats or a no-play slate.
Search Players	Public/Core	Search a player, open focused research, and compare active markets and sites.
Line Movement	Core	Uses persisted opening observations and current lines; compare direction, magnitude, freshness, and market median.

Feature	Access	How to use / what it does
Injury Impact	Pro	Reviews verified status, role, usage, opportunity, teammate context, and recheck guidance.
Analytics	Core	Filters historical results; use meaningful sample sizes rather than short streaks.
EV Scanner	Pro	Ranks qualified candidates by estimated EV, fair probability, or edge; confirm the live line.
Intelligence Lab	Pro	Runs correlation, scenario, matchup, fatigue, similarity, and simulation workflows.
Officiating Tracker	Pro	NBA/WNBA referee and MLB umpire profiles. NFL officials are not yet supported.
Prop Alerts	Pro	Displays triggered conditions and links back to the affected market for confirmation.
Strikeout Pro Gold	Pro	Ranks MLB pitcher strikeout opportunities with projection, edge, trust, lineup, weather, park, and umpire inputs.

9. Build and active slips

1. Add a leg from a card by selecting Over or Under.
2. The active Slip counter reflects selected legs and stays separate from the slip icon.
3. Remove a leg by selecting its chosen side again or using the dedicated Remove control.
4. Review provider, player, market, side, line, odds/multiplier context, and start time before locking.
5. Same-provider rules and duplicate-market protection prevent incompatible or repeated legs.
6. Prop Builder can apply sport, site, category, minimum trust/edge, and leg-count criteria, then allows removal or replacement before save.
7. PI tracks research tickets only. Saving a slip in PI does not submit anything to a sportsbook or fantasy operator.

10. Live tracking and history

Feature	Purpose	Key interpretation
Slip Watcher	Unresolved locked tickets	Shows live value, game state, and grading progress; settled tickets move to history.
Past Slip History	Resolved tickets	Filter All/Won/Lost and review ticket cards, leg results, and today's win/loss percentage.
Track Record	Published model outcomes	Rates remain contextualized by sample size; losses

Feature	Purpose	Key interpretation
		remain visible.
Build Performance	Strategy review	Compare ticket win rate with individual-leg hit rate by sport, site, player, and market.
Closing-line value	Entry versus close	Positive CLV is useful process evidence but does not guarantee the result.

11. Prop Chat and notifications

- Use a public username; never post passwords, payment details, private contact information, or account tokens.
- Community chat supports text, approved HTTPS links, attachments, shared props, and shared slips.
- Direct contacts, mentions, and unread counts use gold badges. Owner messages and identity indicators are visibly distinct.
- The floating chat bubble can be dismissed and restored. It should not cover key utility controls.
- Push and sound preferences are device-specific. Browser permission must be granted before delivery can begin.

12. Supported sports and prop sites

Sport	Current application use
MLB	Baseball player props, scoreboard, game markets, Strikeout Pro Gold, and MLB umpire context.
NFL	Football player props, scoreboard, game markets, injuries, line movement, and research tools.
NBA	Basketball props, scoreboard, game markets, injuries, and referee tendencies.
WNBA	Basketball props, scoreboard, game markets, injuries, and referee tendencies.
NHL	Hockey player props, scoreboard, game markets, and research tools.
Soccer	Supported competition props, scoreboard/game context, and market research; availability varies by league.
NCAAF	College football props and scoreboard/game context when scheduled markets are available.
NCAAB	College basketball props and scoreboard/game context when scheduled markets are available.
CFL	Canadian football props and game context when provider inventory is available.

Prop site	How PI uses it
PrizePicks	Pick'em prop inventory. PI displays provider lines and tracks research selections; confirm rules in PrizePicks.
Underdog	Fantasy pick'em inventory and tracked slip presentation; provider rules and multipliers remain authoritative.
FanDuel	Sportsbook prop and game-market inventory where licensed data is available; verify price/odds in FanDuel.
DraftKings Pick6	Pick6 prop inventory, separate from DraftKings sportsbook lines.
Draft Picks	Normalized provider label used when this feed returns inventory; do not confuse it with DraftKings.
Betr	Betr Picks inventory where the connected feed provides active markets.

SITE DISTINCTION Prop sites are customer-visible market sources. The Odds API, SportsGameOdds, API-Sports, ESPN, Sportmonks, Supabase, Render, Vercel, RevenueCat, OneSignal, and Cloudflare are infrastructure or data services, not selectable prop sites.

13. Owner tools

- Owner Ops is available only to the verified owner role. Paid tier alone does not grant access.
- Run All Checks refreshes API, database, Redis, queue/worker, provider, quota, freshness, scoreboard, billing, active-user, grading, and deployment signals.
- Provider status distinguishes Active, No Current Inventory, Stale, and Outage. Last successful update is shown when available.
- Owner top picks surface up to four qualified picks per supported sport for owner use; normal release gates and data caveats still apply.
- Issues Requiring Review contains overdue pending, questionable grading, provider, pipeline, and billing follow-ups.
- Owner tier preview changes visible member experience without changing the owner's protected authorization.

14. Loading, empty, stale, and error states

State	What the interface should show	What not to assume
Loading	Stable skeleton cards and branded headshot fallbacks	A blank circle or moving layout is not an acceptable loading state.
Empty	Filter-specific or schedule-aware explanation	Zero cards does not automatically mean provider failure.

State	What the interface should show	What not to assume
Stale	Age, affected providers, and recovery guidance	Old inventory is not current merely because it remains visible.
Error	Plain-language message and safe retry	Raw URLs, credentials, stack traces, or private provider details must never be shown.
Offline	Connection-specific recovery message	Do not repeatedly refresh if the device has no network.

15. Troubleshooting and responsible use

Problem	Member action	Owner action
No props	Check selected sport/site and season panel; clear real filters.	Check provider inventory, freshness, quota, and event schedule.
Photos missing	Wait for branded initials/fallback; refresh once.	Check headshot mappings, cache sync, and provider URLs.
Recommendation withheld	Read the explanation and treat the line as information only.	Confirm identity, freshness, model sample, projection, and release gate.
Cannot sign in	Use recovery and confirm the intended identity.	Check Supabase Auth, Turnstile, redirects, and rate limits.
Paid access missing	Refresh Account and restore/manage subscription.	Check RevenueCat entitlement, webhook, and Supabase tier mapping.
Slip pending	Wait for official final status and stats.	Inspect grading review, event linkage, and authoritative results.

RESPONSIBLE USE PI outputs are research estimates, not guarantees. Verify live lines, rules, eligibility, and settlement terms with the external operator. Never risk funds needed for essential expenses.
